FIELD SEEDS

At the time we must print this catalog we can not give prices on Field Seeds, therefore we will issue a price list in February which will be mailed on application. We give a list and short description of varieties generally carried in stock. Be sure to send for the February list if interested.

CORN

We handle native grown seed corn as far as possible as we know it is better for this locality than seed brought from other states. However some varieties can not be obtained locally, these we buy where we can get the best seed.

MEXICAN JUNE. The best variety for the Pecos Valley. Stalks grow large and strong. Ears large, generally two on a stalk. Grain is white with a sprinkling of blue. The best variety for ensilage. A good drought resister. Not bothered by worms.

HICKORY KING. Large grain, small cob, short stalk. A good producer, but bothered by worms more than other varieties.

BLOODY BUTCHER. Large ears, deep red grains. Heavy yielder. Does well in the valley, also in the mountains.

YELLOW DENT. The best yellow variety. A good yielder, not bothered much by worms.

WHITE PEARL. A favorite with gardeners for selling green. Large white ears.

POP CORN. White Rice, Pearl, Queen's Golden. The Pearl is the best as it is not bothered by worms like the other varieties.

SURE CROPPER. Medium size ears, short stalks. Good for selling green.

SMALL GRAIN

When properly planted and cared for all kinds of small grains produce profitable crops in the Pecos Valley. We should be shipping out instead of in.

WHEAT

TURKEY RED. This is the best variety for fall planting. Millers prefer this for their best flour.

MARQUIS. Best spring variety. Yields well, almost as good as Turkey Red for milling.

PEANUTS

TENN. RED. This is the best variety for this locality.

OATS

RED RUST PROOF. This is the only variety to plant in the Valley. Good for either fall or spring planting. Do not consider anything else.

BARLEY

Barley is used for green pastures as well as grain. Plant either spring or fall. Very hardy, will grow where other grains fail.

SCOTCH. The standard bearded variety.

RYE

Fine for winter pasture, stands cold well. A good soiling crop.

DROUTH RESISTING CROPS

These grains will grow and mature where corn will fail for lack of moisture.

WHITE KAFIR. Makes a good yield of very fine grain which is good feed for all kinds of stock. Especially a good chicken feed.

RED KAFIR. Very much like the white except the grain is red. Not bothered by birds as much as other varieties.

DWARF MILO. Grain a light red. Larger than kafir. The best drouth resister of all.

FETERITA. A soft white grain. Earlier than Maize, but shatters more easily.

CANE

EARLY AMBER. Grown chiefly for the fodder. Sown broadcast and cut like hay. It makes an enormous yield. May also be sown in rows like corn and cut with a binder. Fine feed for all kinds of stock.

SUMAC. A very fine cane, a little later than Amber, but a heavier yielder. Our best seller.

SEEDED RIBBON. Used principally for making syrup, but is also good for stock feeding. Large stalks, very sweet, heavy yield.

JAPANESE HONEY DRIP. Also a fine cane for syrup as well as feed purposes.

CLOVER AND GRASSES

ALFALFA. The great hay plant. One of the main crops of the Pecos Valley. Sow in spring or fall. Generally sown with Oats, Wheat, Rye or Barley for a protection.

SWEET CLOVER. Two varieties, White and Yellow Blossom. The White is most generally used. Grown mostly for bees. Makes a fine honey. Bi-ennial.

WHITE CLOVER. Used for lawns, pasture and for bees.

KENTUCKY BLUE GRASS. Used in this locality chiefly as a lawn grass, for which purpose it is excellent. Sow any time in the year but does best in the fall or early spring.

BERMUDA GRASS. Fine for lawns, also pasture. Frost kills the tops, but the roots live over winter in this climate. Further north the winter kills it, but in the Pecos Valley it never dies. Therefore do not plant it where you expect to cultivate afterwards, for it will always be there. Chokes out all other plants. Propagates from roots and seed.

SUDAN GRASS. A large coarse grass which makes fine pasture and hay. Grows with the least moisture of anything of its kind. While it resembles Johnson Grass it is an annual crop and does not live over winter. A fine dry land forage crop.

JOHNSON GRASS. Generally regarded as a pest. Do not plant where you ever expect to cultivate for it will certainly be there always. A good grass to plant on waste land that can not be cultivated. Propagates from roots and seed.

ENGLISH RYE GRASS. Very much like Bluegrass except larger and coarser. Good for lawns if kept mowed. Fine for pasture.

MILLET. A good hay crop if cut before seed is ripe.

COTTON SEED

Cotton has come to the Pecos Valley to stay. To get most out of a cotton crop the first requirement is good seed.

We offer Tracy's Long Staple Durango, grown by Mr. Francis G. Tracy of Carlsbad. Mr. Tracy has spent much time and money in developing this variety and we do not hesitate to say that the seed we offer is the very best.

Plant Tracy's Long Staple Durango and you have taken the first step toward success—GOOD SEED.

Price, \$5.00 per hundred pounds.
